Sales Order 1-10025-1

Gentlemen:

We are pleased to provide the third in a series of Monthly Progress Reports covering the effort expended on subject contract during the period 5 October to 1 November, 1964.

In the area of research, the construction of the test rack, reported in last months progress letter, was completed. The test rack incorporated a rotary plenum pump also under test, and straight lengths of P.V.C. plastic piping interconnected by standard plastic fittings. A series of flow and pressure measurements were taken to determine losses across these fittings. After completion of these tests, the assembly was dismantled, the pipe ends carefully streamlined internally, and the entire system re-assembled. Further flow and pressure measurements were then taken. With no other changes, a ten percent increase in flow, with apportionate decrease in pressure drop was recorded. The test rack is now in progress of dismantling for comparative tests using stainless steel piping and sanitary type fittings such as are used in the food handling industry.

A test stand was completed, and a positive pressure plenum constructed to determine the efficiency of positive and negative pressure capstans.

During the current reporting period much effort has been spent in preparation of the area in which the clean room will be installed. The floor was excavated and the concrete mounting slab for the HTA/5 processor, poured.

U. S. Government

5 November 1964

	Numerous partitions and redundant wiring and piping were removed, and new access doorways opened in walls.						
25X1	A visit was paid to the purpose of detailed checkup of a clean room	25X1					
25X1	specification prepared by which had been submitted to them previously, and to finalize air-conditioning requirements.						
	A schedule of erection was submitted to which set back the starting date of first stage erection of the floor to	25X1					
25X1	November 23rd. A strong request was made by to the company to do everything possible to bring forward this starting	25X1					
20/(1	date. A return visit was made to the for the purpose of final contract negotiations and approval of drawings and specifications.						
	Work contemplated during the forthcoming reporting period is as follows:						
	1. Commencement of clean room erection.						
	2. Testing of liquid bearings.						
	3. Testing of transport capstans.						
	4. Continuing of pressure drop tests.						
	Funds committed or expended to date are approximately If you should have any questions or desire further information, please do not hesitate to contact us.	25X1					
	Very truly yours
